SOFTWARE EXPERT – SOLUTION ARCHITECT

SUMMARY

Experience developing and architecting large-scale applications in big Brazilian companies, such as banks, e-commerce/marketplace, loyalty, etc. Good experience working on distributed and highly available applications based on microservices by using AWS, Kubernetes, Service Mesh, SpringBoot, and Message Broker. Also, service-oriented architecture, enterprise integration patterns, SOAP web services, RESTful, etc.

EXPERIENCE

LIVELO BRAZIL
July 2019 – March 2023

Solution Architect Specialist II

Develop the design of the architecture of the solution following the guidelines and principles of the architecture, establish the alignment of the solution between business requirements and technical feasibility, from conception to delivery in the production of products and projects, supporting teams in front and backend development.

Achievements:

- Project that makes it possible to pay with Livelo points on the Amazon Brazil marketplace
- Digital wallet that allows paying with points using QR code in establishments
- Architecture of Livelo's marketplace project integrated with several companies that makes it possible to buy products with reais (BRL) and earn points

COMPASSO UOL
August 2016 – July 2019

Solution Architect

Consulting for corporate clients, helping them to understand projects and problems, outlining solutions, referring them to the development factory and assisting them in more complex developments, reviewing pull requests and participating in meetings with Tech Leaders discussing development patterns.

Achievements:

- Creation of integration architecture for a large market network in Brazil with product suppliers
- Creation of an API integration pattern with Oauth2 using API Gateway
- Creation of a standard on how to work with the API in general, in addition to providing training for new developers

ACCENTURE
December 2013 – July 2016

Software Engineering – Architect

Consulting for enterprise customers, working on architectural solutions from comprehension, design, documentation, and development using Java and SOA (service-oriented architecture)

Achievements:

- Integration of the telephone system and closed channel (SKY - Tv paid service) with the main means of online payments
- Development of means of payment for an insurance company using Oracle SOA
- Training for new integration developers to work with Oracle Service Bus and Oracle Soa Suite
